

Total length: 34,07mm

Head diameter: 1,5mm

Barrel diameter: 1,37mm

Working stroke: 4,2mm

Spring force at working stroke: 1,0N

Head type: Rubber

Head material: Electrically conductive silicone

## Contacting button pads with conductive rubber pitch size: 2,54mm

Article number: 100.403.15.10

Receptacle: Series 100

Benefits of conductive rubber head type test probe:

- Connect the circuits on a PCB of a "Rubber Button Pad" as softly as possible to avoid any damage on the surface
- Low costs thanks to standardized parts
- Compatible with standard 100mil receptacles
- Relatively low typical resistance
- Rubber hardness 65 Shore "D"

Just one addition: This probe was specifically made for this application and does not have the same electrical properties as our series 100. It's typical resistance for example is not in the range of mOhms anymore.
