

Tools for Threaded Test Probes

Edition 4.3

Tool head types

Square Closed (SC)

Square Open (SO)

Reduced Square (RS)

Teeth (T)

Double "D" Open (DO)

3 Teeth (T3)

Sizes in mm

Type SC, SO, RS

Type T

Type DO

Order Nr.	Head Type	A	B	C	SW size	Max head size	Fixtest	Ingun	Feinmetall	PTR

IGL-TL-TRQ -Torque control handle

Our new economic torque control handle ensures a safe screw-in torque for threaded test probes. The desired torque can be set up with the set screws on the side.

Calibration of tool is available upon request.

(IGL-TL-TRQ is only compatible with IGL-TL-XX bits produced after 2015.04.13.)

Broken probe extractor for threaded probes (IGL-TL-EX14 - threaded probe with OD 2.65mm)

Step 1) Insert the tool into the receptacle and start to turn it counter clockwise until the tool “grips” the broken probe inside.

Step 2) Unscrew the broken probe from the receptacle

Step 3) Remove the probe and unscrew the probe from the tool.

Broken probe extractor for threaded probes (IGL-TL-EX1 - threaded probe with OD 1.65mm)

Step 1) Insert the tool into the receptacle and start to turn it counter clockwise until the tool "grips" the broken probe inside.

Step 2) Unscrew the broken probe from the receptacle

Step 3) Remove the probe and unscrew the probe from the tool.
